

Trelligence is Early Participant in Autodesk Exchange Apps store for Autodesk® Revit®

Trelligence Affinity™ App for Autodesk Revit Available Online on the Autodesk Exchange Apps store

Houston, TX, USA (May 11, 2012) –Trelligence, Inc. has launched its new Trelligence Affinity™ App for Autodesk Revit on the Autodesk Exchange Apps store. Trelligence is the creator of Trelligence Affinity software, the industry-leading architectural programming, early design, and data aggregation tool. Autodesk Revit software is specifically built for Building Information Modeling (BIM), helping building professionals design, build, and maintain higher-quality, more energy-efficient buildings.

The Autodesk Exchange Apps store is a portal to the Autodesk Revit software ecosystem, providing access to Add-Ins that allow designers to more efficiently author information-rich building information models. The store can be accessed at this address: <http://apps.exchange.autodesk.com/RVT/Home/Index>.

Trelligence, a long-time member of the Autodesk Developer Network, was a beta participant for the Autodesk Exchange Apps store for Autodesk Revit. The new Trelligence Affinity app is an architectural programming add-on app for Autodesk Revit users. From within the Revit environment, the Affinity Revit app enables building project team members to create or import a program and use that program data to guide the design development. The team members can validate the Revit design against the program to ensure that the design meets the initial requirements of the client. And various reports and online views of the program data can easily be accessed.

“We welcome Trelligence as an early participant – the Affinity app for Revit is a great example of the range of valuable add-ons available on the Autodesk Exchange store,” said Jim Quanci, director, Autodesk Developer Network. “The Affinity app is a full function add-on to Autodesk Revit software, delivering robust programming functionality to all Autodesk customers in the AEC industry who use Revit on their building design projects.”

“We created the Affinity app for Revit to give Autodesk Revit users a solid basic programming tool that functions completely within the Revit environment,” said Larry Ciscon, president of Trelligence. “The BIM process begins with programming – so the Affinity app provides the capabilities to get a building design team off to the right start. The Affinity app is easy to learn and use, and it functions seamlessly within the Revit environment.”

About Trelligence

Trelligence Affinity™ is a unique and comprehensive software solution for the worldwide AECO industry that offers a full suite of architectural programming, early design, and design-to-program validation analysis tools. Affinity delivers seamless interoperability with Autodesk Revit® Architecture, Google SketchUp™, ArchiCAD®, and IES VE-Gaia & VE-Navigator for LEED®, for an efficient and integrated project lifecycle that enables real-time design-to-program analysis and unprecedented early sustainability analysis.
