

Analyze + Report

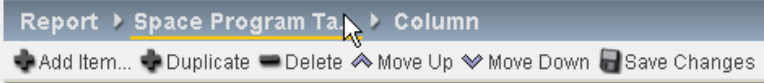

Affinity automatically generates reports with a single click, analyzing and displaying project program and design data. The Affinity Report Editor enables project teams to fully customize the structure, style, and content of reports to match the firm’s design standards. The new Affinity 6.0 release features additional functionality that makes it easier and faster for end users to change existing reports and/or create new ones, improving the user experience by providing a simple and more efficient report customization process.

Select Features

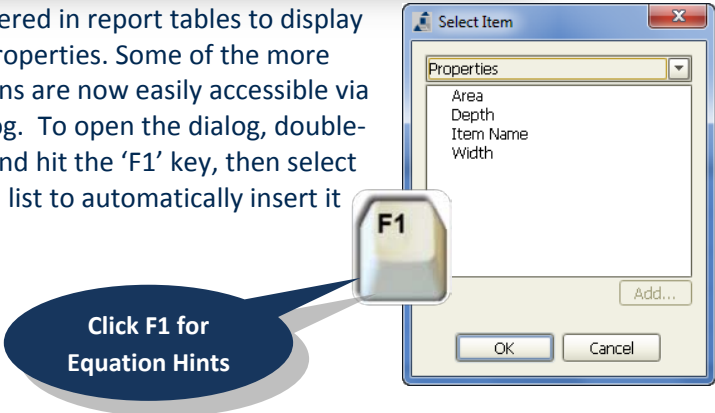

New Report Toolbar

The new two-level toolbar contains a path hierarchy and toolbar. You can select any item in the path to control its properties. Add, duplicate, delete, or re-order items in the current report and save changes using the icons located in the toolbar directly above the report window.

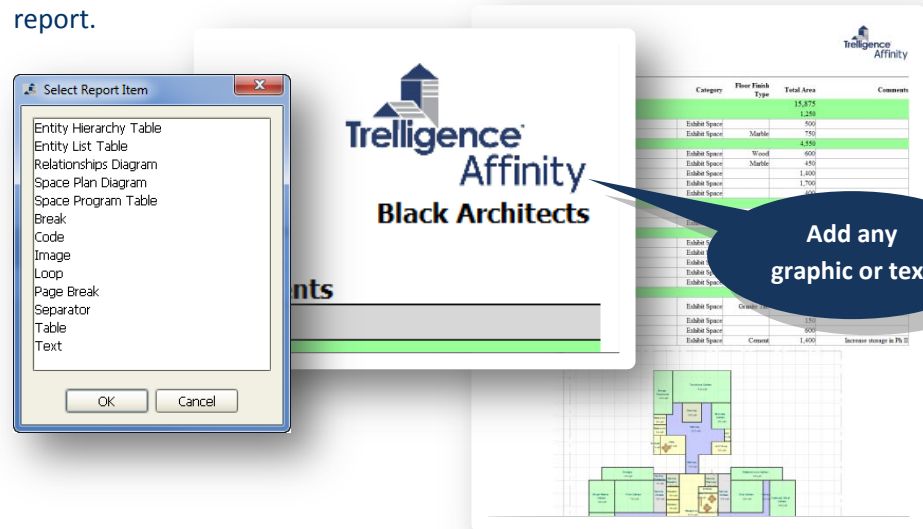

User-Friendly Equation Hints

Equations can be entered in report tables to display custom, calculated properties. Some of the more common cell equations are now easily accessible via the new Affinity dialog. To open the dialog, double-click the cell to edit and hit the 'F1' key, then select an equation from the list to automatically insert it into the cell.

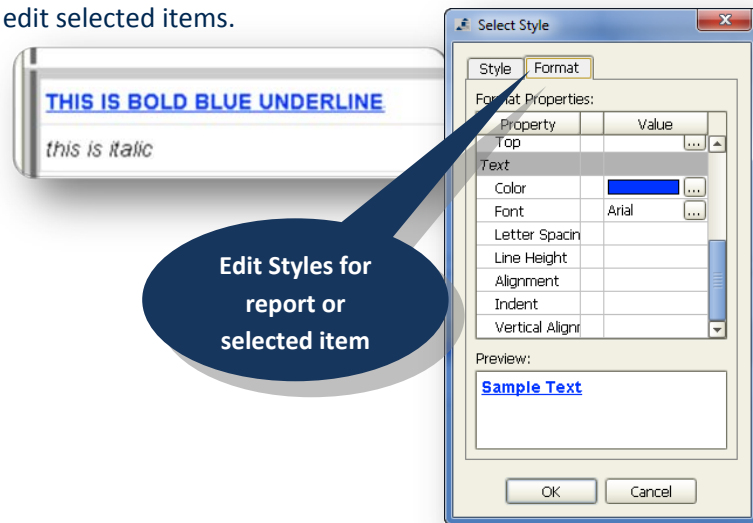

Customizable Report Content: Text, Data, and Graphics

All project data in Affinity, textual or graphical, may be added as an item in a report. In addition, images such as logos, tables, horizontal lines, and space and page breaks, can be added to visually enhance your final report.

Simple Style Formatting

The report editor displays changes immediately when fonts are changed, rows/columns are inserted/ deleted, and column widths are adjusted. Style sheets are used for consistency in formatting, or the new Format tab can be used to quickly edit selected items.

Export Reports

Open the Affinity Desktop to quickly share reports with project team members and clients by exporting reports to common formats - Word, Excel, or HTML - via the export icon in the reports view toolbar.

Affinity Reporting Benefits

- Automatically analyze project data with a single click.
- Print or export (to Word, HTML, or Excel) professional reports to share with clients & team members.
- Customize logos, styles and content to reflect your firm's corporate image & existing presentation tools.
- Build a list of custom reports that can be saved to the master template and used in future projects.
