

Trelligence Inc. Named an Autodesk Preferred Industry Partner

Trelligence Affinity for Revit Optimizes Performance for Autodesk Customers in the AEC industry

Houston, TX, USA (June 3, 2008) – Trelligence Inc., a global innovator of architectural programming and schematic design software, today announced that it has been chosen as a Preferred Industry Partner by Autodesk, Inc., the leader in 2D and 3D design software for the manufacturing, building and construction, and media and entertainment markets.

As part of the Autodesk Developers Network, Trelligence has worked closely with Autodesk to develop and enhance its software solution, Affinity for Revit. Affinity for Revit supports the earliest phases of the building information modeling (BIM) process using Revit Architecture software.

Created for architectural programmers, architects, and other AEC professionals, Affinity for Revit works with the entire Revit platform, and offers the ability to capture detailed program information such as space requirements, adjacencies and abstract constraints for the creation of 2D and 3D schematic designs based on those requirements. An early schematic design can be easily loaded into Revit Architecture software to create a Revit project via the “plug-in” bi-directional integration. The Revit software user then has access to the Affinity space program and detailed project requirements throughout the design phase. As the design progresses, Affinity provides ongoing analysis of the design's compliance to the program requirements, alerting the designer to program violations. This enables the design team to make informed decisions, reducing later rework and helping to deliver designs that meet the client's expectations.

“We are very pleased that Autodesk has selected Trelligence as a Preferred Industry Partner”, said Trelligence President, Larry Cison. “We believe that this relationship will enable even more Revit users to benefit from Affinity's ability to introduce computable building information into the earliest part of the BIM process.”

“We're proud to be working closely with an industry leader like Trelligence,” said Jim Quanci, director of the Autodesk Developer Network. “Together with our partners, Autodesk is committed to developing solutions that help customers experience their designs before they're real. Partners like Trelligence are central to achieving this goal.”

The Autodesk Preferred Industry Partner program delivers tightly integrated, industry-specific software solutions that leverage the power of Autodesk's 3D modeling and simulation technologies to create competitive advantage for customers. Members of the Preferred Industry Partner Program are market-leading software companies that Autodesk is working closely with to

provide customers the breadth and quality of tools they need to make the move from 2D design and drafting to 3D modeling and simulation.

About Trelligence

Trelligence is a Houston-based software company focused on enhancing the early architectural design process with real-time design+analysis tools built on top of domain-specific knowledge templates. Targeted at the worldwide architectural, engineering, construction and owner/developer (AECO) market, the Trelligence Affinity™ patent-pending software integrates with Revit Architecture software and other design tools, extending the benefits of building information modeling (BIM) – faster planning, less rework and better team communication – to the early design phase of complex building projects. Trelligence products are available directly from Trelligence, www.trelligence.com, or through an international network of Authorized Resellers.

Autodesk, AutoCAD and Revit are registered trademarks of Autodesk, Inc., in the USA and/or other countries. All other brand names, product names, or trademarks belong to their respective holders.
