College of Architecture™

Affinity Experience

“We purchased Affinity because we were looking for a building information modeling tool, which resides in the preliminary and/or schematic design phase and extends its capabilities to the next phase of building design by interoperability. Affinity has been used as one of the BIM tools during the Building Lifecycle for a fourth-year building technology class. Affinity improves students’ understanding about the concept and impact of Building Information Modeling and its subsequent interoperable tools through the Building Lifecycle.”

About Texas Tech University College of Architecture

The Texas Tech University's College of Architecture currently is a single discipline unit among seven colleges and two schools in the university. The College has 800 undergraduates and 150 graduate students. Its professional architecture program is a Masters of Architecture and is complemented by a Bachelor of Science in Architecture, Masters of Science in Architecture, and a PhD program in Land-use Planning, Management, and Design. The College has dual degree programs with Business Administration and Civil Engineering as well as collaborative courses with Interior Design and Landscape Architecture. The College prides itself on the quality of its teaching and its expanding collaborative research agenda.
